

# DUSTIN NIEVES

IT OPERATIONS | AUTOMATION | FULL-STACK APPLICATION DEVELOPMENT

Clermont, Florida | 646-881-5060 | [nievesdustinl@yahoo.com](mailto:nievesdustinl@yahoo.com) | [linkedin.com/in/dustin-nieves](https://www.linkedin.com/in/dustin-nieves) | [github.com/diese-tech](https://github.com/diese-tech)

---

## PROFESSIONAL SUMMARY

---

IT operations professional with 8+ years of enterprise technology experience across the United States Marine Corps and The Walt Disney Company, including 4+ years supporting Disney's enterprise technology operations. Experienced in incident response, service management, system administration, virtualization, network infrastructure, technical readiness, and cross-functional operations.

Expanding into software development and automation through the design and delivery of full-stack applications, internal tools, and operational platforms using TypeScript, Next.js, React, Supabase, PostgreSQL, and Python. Recent work includes a multi-repository league operations platform, a field-service dispatch SaaS product, a QR ordering and loyalty prototype, and a locally hosted retrieval-augmented AI assistant.

## CORE COMPETENCIES

---

Enterprise Technology Operations | Incident Management | Service Readiness | Workflow Automation | Full-Stack Application Development | System Administration | Cross-Functional Coordination | Technical Documentation | ITIL Service Management | Virtualization | Database Systems | Testing and Quality Assurance

## PROFESSIONAL EXPERIENCE

---

### THE WALT DISNEY COMPANY

#### HyperCare Operations Analyst | Enterprise Technology Operations Center

September 2022 - Present

- Coordinate HyperCare readiness and operational support planning for major enterprise technology implementations, events, and service transitions.
- Partner with project managers, technical teams, service owners, and operations stakeholders to identify critical milestones, support requirements, escalation paths, and service risks.
- Translate complex technical plans, change records, support tickets, and stakeholder communications into standardized operational materials for enterprise support teams.
- Drive consistent use of ServiceNow, Smartsheet, Confluence, and related service-management tools across Incident, Change, Problem, and Configuration Management workflows.
- Facilitate cross-functional readiness discussions and align technical teams on monitoring, communications, escalation procedures, and post-launch support expectations.
- Communicate service impacts, operational risks, readiness status, and support requirements to technical leaders and executive stakeholders.
- Design internal automation and workflow tooling that standardizes operational outputs, reduces repetitive manual work, and improves consistency across readiness-planning activities.

#### Technical Operations Center Analyst | Disney Technology Operations Center

September 2021 - September 2022

- Monitored enterprise applications, infrastructure, and service health within a high-availability technology operations environment.
- Led real-time triage and escalation for critical incidents affecting business applications, infrastructure, and guest-facing services.
- Coordinated application, network, server, database, and vendor teams during high-severity incidents to restore service and minimize operational impact.
- Performed connectivity, functionality, and systems-health checks across VMware, vSphere, Active Directory, and Windows-based environments.
- Maintained accurate incident timelines, stakeholder updates, technical notes, and escalation records throughout active service disruptions.
- Followed established ITIL incident-management procedures while adapting communications and escalation paths to rapidly changing technical conditions.

### UNITED STATES MARINE CORPS

#### Senior System Administrator

January 2019 - August 2021

- Administered and maintained server, network, identity, and communications environments supporting military operations and organizational users.
- Consulted with users, engineers, and leadership on system modifications, technology upgrades, infrastructure requirements, and operational constraints.
- Diagnosed and resolved complex hardware, software, connectivity, authentication, and systems-performance issues.
- Managed Windows Server, Active Directory, VMware, vSphere, Microsoft Exchange, SQL Server, and Cisco communications technologies.
- Trained and mentored three network administrators and two data systems administrators in system deployment, troubleshooting, maintenance, and operational procedures.

- Implemented and enforced network and system security protocols while maintaining zero reported security breaches during tenure.
- Supported continuity of operations through preventive maintenance, technical documentation, access control, backup procedures, and incident response.

#### **Junior System Administrator / Data Systems Technician**

**January 2017 - January 2019**

- Supported secure technology and communications services for 23 military units during field exercises and operational deployments.
- Built, configured, and deployed virtualized Microsoft Exchange and SQL Server environments using VMware and vSphere.
- Installed and supported Cisco Unified Communications Manager telephony systems in tactical and enterprise environments.
- Troubleshoot Active Directory, Windows Server, virtualization, networking, cybersecurity, and end-user technology issues.
- Configured user accounts, permissions, group policies, server services, network connections, and communications equipment.
- Trained junior administrators in server deployment, virtualization, troubleshooting, cybersecurity practices, and technical documentation.

## **SELECTED SOFTWARE PROJECTS**

---

### **SERPENT ASCENSION LEAGUE**

#### **Multi-Repository Competition Operations Platform | sal-draft-league.vercel.app**

**2024 - Present**

- Architected and maintain a multi-repository operations platform spanning a Next.js web application, Discord workflow service, and independently governed Supabase database contract.
- Built a public league hub and administrative control center with schedules, standings, searchable player profiles, team rosters, registrations, announcements, live drafts, and operational review workflows.
- Implemented Discord OAuth for administrators and players, including profile claiming, player registration, captain sessions, and role-based administrative access.
- Developed structured Discord workflows for match reporting, rescheduling, screenshot evidence collection, administrator review, division configuration, and CSV-based identity synchronization.
- Designed Supabase as the authoritative system of record while using Discord as a structured workflow-intake and receipt-delivery layer.
- Added audit logs, human-in-the-loop approvals, recoverable state changes, database contract checks, and atomic administrative workflows.
- Established an automated quality program with 700+ passing tests across the SAL platform, covering unit, integration, end-to-end, security, database contract, and Row-Level Security validation.
- Built CI gates covering ESLint, TypeScript validation, dependency auditing, secret scanning, automated testing, production builds, and Playwright browser testing.

Technologies: Next.js | TypeScript | React | Supabase | PostgreSQL | Discord.js | Playwright | Vitest | GitHub Actions | Vercel | Railway

### **SWIFTDISPATCH**

#### **Field-Service Dispatch SaaS | swiftdispatch.app**

**2025 - Present**

- Built a field-service dispatch platform for HVAC companies using Next.js, TypeScript, Supabase, Twilio, Redis-compatible rate limiting, and Sentry.
- Developed a live drag-and-drop dispatch board for creating, assigning, tracking, rescheduling, and completing service jobs.
- Implemented secure SMS links that allow field technicians to update job status without installing a separate mobile application.
- Built an on-site quote workflow with configurable line items and customer approval through SMS.
- Created a public customer-intake experience that submits service requests directly into each company's dispatch workflow.
- Added analytics for response time, quote acceptance, technician revenue, and no-access rates.
- Engineered queued background SMS delivery, tenant-aware data handling, endpoint backpressure, and rate-limited public workflows.
- Created load-testing scripts for customer, technician, office, and multi-tenant workflows.
- Built a seeded demonstration workspace that allows prospective users to explore the platform and automatically resets to realistic data each day.

Technologies: Next.js | TypeScript | React | Supabase | PostgreSQL | Twilio | Redis | Sentry | Vitest | Zod | Vercel

## **ADDITIONAL PROJECTS**

---

### **BREWLOOP**

#### **QR Ordering and Loyalty Platform**

- Built a mobile-first ordering and loyalty prototype for independent cafes with customer, staff, and owner experiences. Designed tenant-aware database policies, transactional order creation, Realtime order publication, and a credential-free demonstration mode.

Technologies: Next.js | TypeScript | Supabase | PostgreSQL | Realtime | Square

### **HERSONBOT**

#### **Trust-Gated Retrieval-Augmented Strategy Assistant**

- Built a locally hosted Civilization VI strategy assistant with transcript ingestion, semantic retrieval, human review, and timestamped source citations. Designed a trust-gated publishing workflow requiring content to be classified, approved, embedded, and indexed before retrieval.

Technologies: Next.js | TypeScript | PostgreSQL | pgvector | Docker | Ollama | RAG

### **MCGRAW MADE STUDIO**

Custom-Fabrication Business Website

- Built a modular business website with quote requests, product listings, gallery content, policy pages, email submissions, and Square payment-link support.
- Technologies: Next.js | TypeScript | Tailwind CSS | Framer Motion | Square

TOXIC INK STUDIOS

Small-Business Website

- Designed and developed a responsive website intended to strengthen the studio’s digital presence, customer experience, and conversion flow.
- Technologies: HTML | CSS | JavaScript | Responsive Design

EDUCATION

|                                                                   |             |
|-------------------------------------------------------------------|-------------|
| Associate of Science in Cybersecurity   Lake-Sumter State College | In Progress |
| Software Engineering Program   Frontend Simplified Institute      | In Progress |

Applied coursework in JavaScript, React, responsive frontend development, software engineering fundamentals, and modern web application development.

CERTIFICATION

ITIL 4 Foundation | AXELOS Global Best Practice

TECHNICAL SKILLS

**Languages:** TypeScript | JavaScript | Python | SQL | HTML | CSS  
**Frameworks and Frontend:** React | Next.js | Tailwind CSS | Framer Motion  
**Backend and Data:** Supabase | PostgreSQL | Prisma | pgvector | Row-Level Security | Realtime | REST APIs  
**Testing and Quality:** Vitest | Playwright | Unit Testing | Integration Testing | End-to-End Testing | Load Testing | Database Contract Testing  
**Cloud and DevOps:** Git | GitHub | GitHub Actions | CI/CD | Docker | Vercel | Railway | Redis | Sentry  
**Platforms and Integrations:** Twilio | Square | Discord.js | Discord OAuth | Ollama  
**Enterprise Technology:** VMware | vSphere | Active Directory | Windows Server | Microsoft Exchange | SQL Server | Cisco Unified Communications Manager | ServiceNow | Smartsheet | Confluence
